## LEARNING OBJECTIVES:

- Explain systemic therapies to treat bleeding in HHT and select antifibrinolytic and antiangiogenic therapies in specific clinical situations.
- Identify iTTP as a chronic medical condition and the long-term management issues for providers.
- Examine classification of anti-PF4 disorders and describe treatment of anti-PF4 disorders by anticoagulation and high-dose IVIG.
- Evaluate diagnostic procedures and rational therapy of PRCA.
- Apply new personalized treatment algorithms for AA and PNH.
- Determine advantages and limitations of the introduction of novel agents in the treatment of PTCL.
- Examine major updates in non-Hodgkin lymphomas from the past year.
- Manage the diagnosis, treatment and prevention of pregnancy-related pulmonary embolism.
